BGS - Laser Type
Fine spot / fast response jobs

BGS - LED Type
For general appliactions

- BGS (Background Suppression Type) Sensors, the best sensor for neglecting background. Conventional LED, or Laser Beam types are available.
- 250 μ sec fast response (All the Laser Type)
- 1mm fine spot in BGS optical system (BGS-ZL : Laser types)

1mm fine spot

ϕ 1mm of fine spot for tiny object even in BGS sensing. Long distance Type gives ϕ 1.5mm fin spot in 300mm distance.

BGS optical system designed with Laser light source

Extremely small BGS type sensors are only 17 x 10 x 20mm. Ideal for use in OEM equipment such as Printed Circuit Board processing machines.

250 μ sec response

Good for fast moving object.

Dual indicator

6mm spot size that could not be influenced with small holes on the PC Boards. For those PC Boards that may have bigger holes BGS-Z30 models works in 18mm spot size.

Dual indicator

BGS-Laser types has dual indicator to let you know if Laser Power is ON / OFF.

4turn Pot

4-turn Pot for convenience of setting distance. The pot turns endless so you don't break pot stopper.

Retro-Reflective in Coaxial Beam optics
The best for Plastic/Glass Sensing

- Coaxial light source gives extremely tight alignment to the target. Alignment of sensor is easy thanks to bright projected LED spot.
- 250 μ sec fast response (ZR-X, coaxial beam type)
- World's standard model ZR-Q (general type) and ZR-QX (coaxial beam type) for Plastic and Glass applications.

Dead area is zero !

You don't have to mind about dead area that may come in shaking conveyor.

Repeat Accuracy

Very tight Repeat Accuracy, 0.2 - 0.3mm for BGS type. Even Thru-beam and Retro types have 0.3mm Repeat Accuracy(*).

*=Tested at the middle point of sensing range.

Good selection of sensors for various kind of bottles.

Glass and plastic bottles are curved in various shape, and you are required to find the best optics of sensor in field test. We provide Co-axial beam sensor as well as non co-axial beam type so you could find the best one for your bottle.

Coaxial LED

Coaxial light source gives extremely tight alignment to the target, Alignment of sensor is very easy thanks to bright projected LED spot.
